CUP INSERTION INSTRUCTIONS

Muse

HOW TO USE A MENSTRUAL CUP

Thank you for your participation in our research! Below is a step-by-step guide on how to collect your menstrual blood sample. Please contact muse@mycells.bio for any questions or concerns!

1 CLEAN THE CUP

- **Boil the cup** in water for 5-10 minutes to sanitize it
- **Allow it to cool** completely before handling

2 PREPARE FOR INSERTION

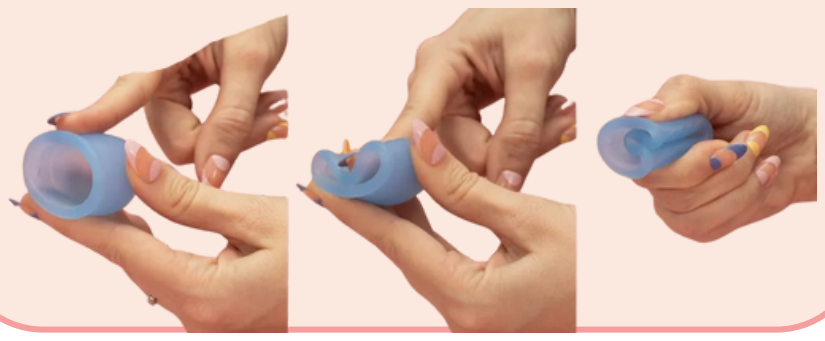
- **Wash your hands** with soap and water
- **Rinse the cup** with clean water to make insertion easier
- You may also use a small amount of water-based lubricant if needed

3 FOLD AND INSERT

Here are two of the most common ways to fold the cup for insertion:

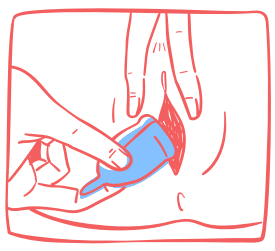
C-FOLD

Press the cup flat with one finger, then fold it in half to make a "C" shape. This makes the top smaller for insertion



PUNCH-DOWN

Push the rim of the cup down into the base creating a narrow point. This makes one side very small and easy to insert.



In a comfortable position (sitting, squating, or standing with one leg raised), gently insert the folded cup into the vagina, aiming backward toward the tailbone

4 CHECKING THE SEAL

- Once the cup is in place, **let it open fully**.
- Run a finger around the outside of the cup to feel that the rim is fully open and round.
- You can also pull the stem of the cup slightly to ensure suction
- When sealed, you should not feel folds or dents in the rim.

5 WEAR TIME

- The cup can typically be worn for **4–8 hours**, depending on your flow.
- Do **not** wear it for more than 12 hours.

6 SIGNS THE CUP IS FULL

- Bubbling sensation, indicating the cup is about to overflow
- Light spotting or leakage.
- A feeling of heaviness, or that the cup is sitting lower than usual.
- Mild pressure or a sense of fullness.
- You've reached the typical wear time for your flow (ex: ~7 hours on heavier days).
