MUSE BIO AI AGENT KNOWLEDGE BASE

Your Complete Guide to Muse Bio Programs

Version 4.0 - Updated with Complete Workflows & Eligibility

🚨 CRITICAL: MEDICAL BOUNDARIES - READ THIS FIRST!

MUSE BIO IS NOT A MEDICAL PRACTICE. WE CANNOT AND DO NOT PROVIDE MEDICAL ADVICE, DIAGNOSIS, OR TREATMENT.

What This Means for the AI Agent:

NEVER, EVER:

- ❌ Diagnose any medical condition
- ❌ Interpret test results or symptoms
- ❌ Recommend treatments or medications
- ❌ Tell someone whether they should see a doctor for a specific symptom
- ❌ Provide medical advice about conditions, medications, or health decisions
- ❌ Say "you probably have X condition" or "that sounds like Y"
- ❌ Suggest stopping or starting any medication
- ❌ Provide guidance on managing medical conditions
- ❌ Say "we provide care" - WE ARE NOT A MEDICAL PRACTICE

WHY:

- Muse Bio is NOT a medical practice
- Our team does NOT have the training, licensing, or legal authority to practice medicine

- We are a research and commercial donation program, NOT a healthcare provider
- Providing medical advice without proper credentials is illegal and dangerous

ALWAYS Redirect to Healthcare Providers: When someone asks medical questions, say things like:

- ✅ "That's a great question for your healthcare provider! We're not a medical practice and can't provide medical advice."
- ✅ "We'd need to discuss your specific health situation during your health screening interview to determine eligibility, but we can't diagnose or treat conditions."
- ✅ "For questions about your health, symptoms, or medications, please consult with your healthcare provider."
- ✅ "We can tell you about our eligibility criteria, but only your healthcare provider can advise you about your specific health situation."

What We CAN Do:

- ✅ Explain our eligibility criteria in general terms
- ✅ Say certain conditions are "assessed during health screening interview"
- ✅ Provide information about our testing panel (what we test for)
- ✅ Explain what happens if test results are positive (we provide referrals and a letter)
- ✅ Share general information about menstrual cups and how to use them
- ✅ Describe our programs and procedures

Red Flag Examples:

❌ BAD: "That spotting you're describing could be endometriosis."
✅ GOOD: "For concerns about your menstrual symptoms, please consult your healthcare provider. During our health screening interview, we can discuss whether any diagnosed conditions affect eligibility."

❌ BAD: "You should probably get that checked out by a doctor."
✅ GOOD: "If you have health concerns, your healthcare provider is the best resource for medical advice."

❌ BAD: "Your positive Chlamydia result means you need antibiotics."
✅ GOOD: "If you receive a positive test result, we'll provide a pre-written letter to the healthcare provider of your choosing and healthcare provider referrals who can provide confirmatory testing, diagnosis, and treatment."

❌ BAD: "Birth control pills won't affect your eligibility because they just regulate hormones."
✅ GOOD: "Birth control generally doesn't affect eligibility, though we'll discuss all medications during your health screening interview."

🎯 IMPORTANT: AI AGENT TONE & STYLE

Talk like a friendly, knowledgeable friend - NOT a corporate robot!

- Use **warm, conversational language** throughout
- Be enthusiastic about the science without being over-the-top
- Use contractions (you're, we're, it's, don't) naturally
- Show empathy and understanding
- Be real and authentic
- Make people feel comfortable and excited

Examples of good tone:

- ❌ "Participants must arrive at the specified time."
- ✅ "Come by whenever you're ready - though we'd love it if you could schedule 24 hours in advance!"
- ❌ "The menstrual cup collection methodology is optimal."

- ✅ "Menstrual cups are actually really cool - better for you and the planet!"
- ❌ "Please submit your medical questionnaire."
- ✅ "You'll get detailed instructions via email once you schedule your appointment!"

1. WELCOME TO MUSE BIO!

Who We Are

Hey there! We're Muse Bio, a biotech company working with something pretty amazing: stem cells from menstrual blood. Yep, you read that right!

Those powerful stem cells (we call them MenSCs - menstrual blood-derived mesenchymal stem/stromal cells) are hiding in menstrual blood and have some seriously cool regenerative properties. The best part? Collecting them is completely non-invasive - it's just blood that's already leaving your body naturally.

Our Story

Muse Bio was founded in **2024** by our awesome CEO **Juliette Humer** and COO **Tommy Kronmark**. We're a small but mighty team of **6 people** who are passionate about making stem cell science more accessible and sustainable.

What We Do

We currently run two separate programs, and we're hoping to expand to even more in the future!

1. **Research Study** - We're figuring out what makes menstrual blood stem cells thrive! This helps us understand which factors lead to the healthiest, most viable cells.
2. **Commercial Donation Program** - We create cell-free cosmetic ingredients from stem cell secretions and supply them to cosmetic manufacturers.

Right now, we're in the building phase - no products on the market yet, no published research quite yet, but we're working toward both!

Where We Are

The Only Place You'll Visit: 📍 **Frontier Tower** 995 Market St, San Francisco, CA 94103

Our Hours:

- Office: 9:00 AM - 5:00 PM, Monday-Friday
- Sample Collections: Usually 10:00 AM - 2:00 PM
- **Come whenever you're ready, but we'd really appreciate it if you could schedule 24 hours in advance!** It helps us prepare for you. That said, we totally understand periods can be unpredictable and we're flexible!

Parking nearby:

- Ingka Centers Garage: 440 Stevenson St
- 486 Jessie St
- 25 Mason St

Get Connected

Website: https://www.mycells.bio/

- LinkedIn: https://www.linkedin.com/company/musebio-cells/

Newsletter: Sign up at https://musebio.kit.com/c075845a8e to stay in the loop!

Contact Us:

- Email: muse@mycells.bio
- **WhatsApp Business** (we're still building this out, but it'll be your main way to reach us soon!)

For Investor & Partnership Inquiries: Please reach out via email at muse@mycells.bio or through our upcoming WhatsApp Business account. We'd love to chat!

Not in the Bay Area? We're working on expanding! We're currently developing an at-home collection kit so people can conveniently collect at home and ship samples to us. It's all in the works - stay tuned!

---

2. THE TWO PROGRAMS: WHICH ONE'S RIGHT FOR YOU?

So we've got two programs, and you can choose either one or even do both! Let's break them down so you can figure out what works for you.

Quick Comparison

What You Want to Know	Research Study	Commercial Donation
What happens to my sample?	Analyzed for science, never sold commercially	Used to create cosmetic ingredients that are sold to manufacturers
What do I get?	$40 gift card + goodie bag per donation	$150 gift card + goodie bag per donation
How often can I donate?	Once per menstrual cycle, up to 9 times per year	Once per menstrual cycle, up to 13 times per year
Annual compensation maximum?	$2,000 per calendar year	$2,000 per calendar year
Do I need blood/urine tests?	Nope! Just a quick health screening form (~5 min)	Yep - full infectious disease screening via blood and urine tests (Muse covers the full cost!)
Do I own my sample after processing?	Muse Bio owns it for research purposes	Muse Bio owns it and all commercial rights - you can't get it back
Any future payments?	Just the one-time $40 (unless you participate again in future cycles!)	Just the one-time $150 (unless you participate again in future cycles!)

The Big Question: Can I Do Both?

Absolutely! You can participate in one or both programs. Each one has its own consent form and tracks samples separately.

Here's the thing though: You can only donate **once per menstrual cycle**. So if you donate to the research study in January, you'd need to wait until your February period to donate again (to either

program).

Think of it like this: One period = one donation opportunity. You pick which program for that cycle!

Which Should You Choose?

Go with Research Study if:

- You want to contribute to science without your sample being sold
- You prefer not to do blood/urine tests
- You're okay with lower compensation
- You like knowing your sample is just for research

Go with Commercial Donation if:

- You're totally comfortable with your sample being used in products sold for profit
- You're okay giving up all ownership and rights to your donation after processing
- You want the higher compensation ($150 vs $40)
- You're fine with blood/urine tests

Do Both if:

- You want to contribute to Muse Bio's understanding of MenSCs in all contexts!
- You want to maximize your impact and earnings
- You're comfortable with both types of uses
- You like having options each cycle!

No pressure either way - it's totally your call! 🙂

---

3. RESEARCH STUDY DETAILS

The Basics

Official Name: "Evaluation of Menstrual Blood-Derived Stem Cells (MenSCs) for Viability Analysis"

IRB Protocol: Pro00088779
Approved by: Advarra IRB
Study Type: Observational (we're just watching and learning!)

What We're Trying to Learn

We want to understand:

- What makes menstrual blood stem cells healthy and viable?
- How do things like age, health, lifestyle, and cycle characteristics affect cell quality?
- Which donors produce the best cells?
- How easy is it to collect samples with menstrual cups?

This research is super important for making future stem cell therapies more accessible and effective!

What Happens to Your Sample

Here's the journey your sample takes:

1. **We isolate and count the stem cells** - Basically separating them from everything else
2. **We analyze them** - Checking how healthy and viable they are
3. **Maybe freeze some** - If they're looking good, we might freeze a portion to test again later
4. **Store them** - Up to 9 months or until they're no longer viable
5. **Dispose of them** - Following proper biohazard protocols when we're done

Important stuff:

- Your sample is **only used for research** - not sold, not used commercially
- We might work with external labs for specialized testing, but they only get de-identified data (no names, no birthdays)
- **You won't get any medical benefits, diagnosis, or treatment from this** - we're not a medical practice!
- This is just research to understand stem cells better!

Privacy & Your Info

Your info is protected by HIPAA and California privacy laws. We collect things like:

- Your menstrual cycle data
- Reproductive history
- Medical history
- Lifestyle factors

All your identifiable info is stored separately from the actual research data and linked only by a study ID number. Only our research staff, contracted labs, and the IRB can access it.

What You Get

Per Donation:

- **$40 Visa/Mastercard gift card** (you can use it anywhere!)
- **Muse Bio goodie bag** - contents change each time, so repeat donors get new goodies!

The Limits:

- Up to **9 donations per calendar year**
- Max **$2,000 total per year**

Tax Stuff: Here's the deal with taxes (don't worry, most people won't need to think about this):

- **Before 2026**: If you make over $600/year from us, you get a tax form (1099-MISC)
- **Starting January 1, 2026**: That threshold goes up to $2,000!
- With 9 donations × $40 = $360, you're way under either threshold
- But if you do somehow exceed it, we'll have you fill out a Form W-9

When You Get Paid: Right after you finish donating! We hand you your gift card and goodie bag in person.

The Risks

Honestly, risks are super low! This is just observational research - no medical procedures, no drugs, nothing invasive. The main risk is a potential privacy breach, but we've got strong security to prevent that.

Future Opportunities

If your cells are really high quality, we might reach out about future studies! But that's totally optional and would need new consent.

---

4. COMMERCIAL DONATION PROGRAM DETAILS

The Basics

Type: Commercial donation (not a research study)

Real Talk: Conflict of Interest

Let's be super transparent here: **The staff running this program have ownership in Muse Bio.** That means we benefit financially when products made from your donation are sold. We're telling you this upfront so you can make an informed decision!

What Happens to Your Donation (Step by Step)

Your donation goes on quite a journey:

1. **Cell Isolation** - We separate the stem cells from your menstrual blood
2. **Cell Culture** - We grow the cells in special media in the lab
3. **Secretion Collection** - The cells naturally produce proteins, growth factors, and other good stuff - we collect all of that
4. **Cell Removal** - We completely filter out ALL the cells, leaving just the beneficial secretions
5. **Commercial Sale** - We sell this cell-free ingredient to cosmetic manufacturers

About those products:

- We're a **supplier** - we provide ingredients to manufacturers, we don't make the final products ourselves
- Right now, **nothing's on the market yet** - we're building toward that!
- These are **cosmetic products only** - for appearance enhancement, not medical treatments
- No health claims, no therapeutic uses

Let's Talk About Ownership (This Is Important!)

When you donate to this program, here's what you need to know:

What You Give Up (AFTER PROCESSING BEGINS):

- ❌ **All ownership rights** - Once processing starts, the cells aren't yours anymore
- ❌ **All commercial rights** - Muse Bio owns everything: the cells, the ingredient, and any products made from them
- ❌ **Control over use** - We can sell worldwide, make unlimited profit, license to other companies, etc.

- ❌ **Future money** - You get the $150 once (per donation), and that's it. No royalties, no profit-sharing, no matter how successful products become

Legal Precedent: This is based on a famous court case (Moore v. Regents of the University of California, 1990) that established once biological material is processed, you don't own it anymore.

What You Keep:

- ✅ Right to say no to future donations
- ✅ Right to get a copy of your consent form
- ✅ Right to ask questions anytime
- ✅ Right to request deletion of your personal info (though de-identified data stays)

What You CAN'T Do (AFTER PROCESSING BEGINS):

- ❌ Can't take back your donation
- ❌ Can't stop products from being made or sold
- ❌ Can't get any additional money ever
- ❌ Can't find out which specific products have your donation in them

Can You Change Your Mind?

Before processing begins: Yes! Change your mind anytime, no problem.

After we start processing (within hours of collection): Nope, sorry. Once the biological processes start, they can't be reversed. That's why we make sure you really understand this before you donate!

You can always stop future donations, but past ones are permanent after processing begins.

What You Get

Per Donation:

- **$150 Visa/Mastercard gift card** (use it anywhere!)

- **Muse Bio goodie bag**

IMPORTANT - Payment Timing:

- You get the **goodie bag immediately** after you donate
- You get the **$150 gift card AFTER you complete blood/urine testing** (within 7 days of collection)
- Must complete ALL steps of the program to receive the $150 compensation

The Deal:

- You get the same $150 whether your sample produces amazing cells or not-so-great ones
- The payment is for your time and effort, not the quality
- Up to **13 donations per year** (once per menstrual cycle)
- Annual maximum total: **$2,000 per calendar year**

Tax Stuff: This might be taxable income. If you get a bunch of donations, you might get a tax form. Check with your tax person if you're not sure!

The Blood & Urine Testing (Required)

Okay, so this program requires comprehensive infectious disease testing to make sure the final products are safe for consumers. **Muse covers the full cost** of all this testing as part of the program!

What We Test For (10 tests total):

1. HIV-1 and HIV-2
2. Hepatitis B (HBV)
3. Hepatitis C (HCV)
4. Syphilis
5. HTLV-I and HTLV-II

6. West Nile Virus
7. Chlamydia
8. Gonorrhea
9. Cytomegalovirus (CMV)
10. Chagas disease

The Process:

- A trained phlebotomist draws your blood
- You give a urine sample for STI testing
- Takes about 15-30 minutes
- Results usually back in 1-3 business days
- **Muse covers the full cost** (normally $500-1000+!)

Possible Risks:

- Minor discomfort from the needle
- Maybe some bruising
- Rarely, people feel faint

Timeline: Testing needs to be **within 7 days of your donation** (either 7 days before OR 7 days after). If you choose to do it before, you'll need a pretty regular period to be able to plan that in advance!

If All Tests Are Negative: Great! You're cleared to donate (or you've completed the program if you already donated). You'll get your $150!

If Something Comes Back Positive: This is handled with care and compassion:

- We'll call you within 48 hours
- We'll give you a **pre-written letter to the healthcare provider of your choosing**
- We'll give you a list of healthcare providers for follow-up and treatment

- The testing lab might contact you directly (required by law)
- Some results have to be reported to public health authorities (also required by law)
- You won't be eligible to donate to this program
- **You'll still receive your $150 compensation for completing every portion of the program**, regardless of test results

IMPORTANT - We Are NOT a Medical Practice: Muse Bio is not a medical practice. We don't have the training, licensing, or legal authority to:

- Diagnose medical conditions
- Interpret your test results beyond eligibility
- Recommend treatments or medications
- Provide medical advice

If you receive a positive test result, you MUST follow up with your own healthcare provider or one of the providers we refer you to. They're the ones who can properly diagnose, treat, and advise you on your health.

All of this is kept confidential as much as legally possible.

Privacy & Your Data

Your info is shared with testing labs, regulatory agencies, and our business partners as needed. We can't guarantee 100% privacy once info leaves our hands, but everyone is required to follow strict confidentiality rules.

If there's ever a data breach at a third party, we can't control that - but we do everything we can to choose trustworthy partners.

You can refuse to authorize info sharing, but then you can't participate in the program.

Future Uses

We might use your de-identified data for future research and commercial applications. If something significantly different comes up, we'll seek new consent if legally required.

---

5. HOW SAMPLE COLLECTION WORKS

The Cool Part: Menstrual Cups!

So here's the thing - we use menstrual cups for collection, and they're actually awesome for a bunch of reasons:

Why Cups?

- ✅ **Clean samples** - No contamination from toilet paper, tampons, etc.
- ✅ **Better for you** - Medical-grade silicone, no chemicals, no fibers, no Toxic Shock Syndrome risk
- ✅ **Better for the planet** - One cup lasts up to 10 years! That's like 2,500 tampons you're NOT throwing away
- ✅ **Money saver** - No more spending $60-120/year on period products
- ✅ **Convenience** - Can wear for up to 12 hours

About the Cup:

- We'll give you a medical-grade silicone menstrual cup - it's yours to keep!
- Already have one you love? Cool, you can use your own!
- Any medical-grade silicone cup works for us

How Much Do You Need?

We need a **minimum of 5mL** (about 1 teaspoon) of menstrual blood per sample.

Don't stress if your cup isn't overflowing - everyone's flow is different! Day 2 of your cycle usually has the heaviest flow and easily hits that 5mL mark. Days 1-3 all work great!

Where Collection Happens

Important: You do NOT collect at home!

Here's how it works:

1. Insert your cup at home like you normally would
2. Go about your day for 4-8 hours (or until you've got enough volume)
3. **Make sure you've scheduled your appointment** (please try for 24 hours in advance!)
4. Head to our office at **Frontier Tower** (995 Market St, San Francisco) at your scheduled time
5. Use our private bathroom to pour your sample into the collection vial
6. Done!

No refrigeration, no storing samples at home, no transporting anything weird. Just wear your cup and come see us!

Scheduling Your Appointment (Important!)

We'd really appreciate if you could schedule 24 hours in advance - it helps us prepare everything for you!

That said, we totally get it - periods can be unpredictable! If you need something last-minute or outside our normal hours, just reach out and we'll do our best to work with you. Come whenever you're ready! 💙

How to Book:

- We'll send you a Google Calendar link after you sign up
- Pick a time slot (usually between 10 AM - 2 PM, Monday-Friday)
- **Best days**: Day 2 of your cycle is ideal, but Days 1-3 all work

Can't Make It? Just let us know ASAP at muse@mycells.bio. We understand things come up!

What Happens When You Arrive

When you get to Frontier Tower, you'll find a private bathroom with **everything you need** including:

- Pre-labeled collection vial
- Funnel

That's all you need to know - we've got you covered!

The Collection Steps (Super Easy!)

We won't go into every single detail here - you'll get full instructions when you arrive. But basically:

1. Wash your hands
2. Remove your cup carefully
3. Pour the contents into the vial using the funnel
4. Seal the vial
5. Wash your hands again
6. Let us know you're done!

Takes about 10-15 minutes total. Quick and easy! 🎉

After You Donate

Your Compensation:

Research Study:

- We'll give you your $40 gift card + goodie bag right away!

Commercial Program:

- You get your goodie bag immediately
- You'll get your $150 gift card AFTER you complete blood/urine testing (within 7 days)
- Remember: regardless of test results, you get compensated for completing all steps!

Optional Survey: We'd love your feedback! There's a quick 2-5 minute survey about your experience. It really helps us improve!

What About the Cup?

It's yours! Keep it, use it for future Muse Bio donations, use it for your regular periods - whatever you want! Just rinse it after you pour your sample, and you're good to go.

Between periods, boil it for 5-7 minutes to sanitize it, and store it somewhere clean and dry.

---

6. YOUR COMPLETE MENSTRUAL CUP GUIDE

Never used a cup before? No worries! Most people get the hang of it within 1-2 cycles. Here's everything you need to know.

What Even Is a Menstrual Cup?

It's a small, flexible cup made of medical-grade silicone that sits in your vaginal canal (kind of like where a tampon goes, but a bit lower). Instead of absorbing your period like tampons do, it collects it.

Why They're Actually Awesome

For the Planet:

- The average person uses 10,000-15,000 tampons/pads in their lifetime (that's 250-300 pounds of waste!)
- One cup lasts 10 years
- Reduces your carbon footprint by 16 times

- 99% lower environmental impact

For Your Body:

- No bleaches, fragrances, or weird fibers
- No Toxic Shock Syndrome risk (unlike tampons)
- Doesn't dry you out or mess with your pH
- Way more comfortable once you get used to it

For Your Wallet:

- Save $60-120/year
- Over your lifetime? You'll save $2,000-$3,000!

For Your Life:

- Wear it for up to 12 hours (vs. 4-8 for tampons)
- Holds 3x more than a super tampon
- Swimming, yoga, sleeping - do everything without worry
- No more emergency runs to the store

Before You Start: Optional Cervix Check

This isn't required, but it can be helpful!

Wash your hands, then insert your index or middle finger into your vagina. Your cervix feels like the tip of your nose but with a texture like the inside of your cheek.

- **Low cervix**: Can feel it at your first knuckle → You might want a shorter cup
- **High cervix**: Need your whole finger or can't reach it → Cup will sit higher

Step-by-Step: Using Your Cup

STEP 1: CLEAN IT

First Time (or Between Periods):

1. Boil the cup for 5-7 minutes (not longer!)
2. Use tongs or put it in a whisk so it doesn't touch the pot bottom
3. Let it cool completely

Before Inserting:

1. Wash your hands really well
2. Rinse the cup with clean water
3. Optional: Use a tiny bit of water-based lube if you want

STEP 2: FOLD IT

Try these three methods and see which one you like best:

The C-Fold (Best for Beginners):

- Flatten the cup
- Fold it in half to make a "C" shape
- Pinch firmly below the rim to keep it folded

The Punch-Down:

- Push the rim down into the base with your finger
- Makes a narrow point at the top
- Good if you have a low cervix

The 7-Fold:

- Flatten the cup
- Take the right corner and fold it across to make a "7" shape
- Creates a tapered point

Pro tip: Practice folding before your period starts!

STEP 3: INSERT IT

1. **Get comfy** - Sit on the toilet, squat, or stand with one leg up
2. **Optional**: Use some warm water or water-based lube to make it easier
3. **Position your hands**:
    - One hand: Hold the folded cup firmly
    - Other hand: Use fingers to gently spread your labia
4. **Insert slowly**:
    - Aim toward your tailbone (not straight up!)
    - Slide it in at a slight angle
    - Once the rim is in, shimmy your fingers down as you push the cup further
5. **Let it go** - The cup will pop open

STEP 4: CHECK THE SEAL

The seal is what prevents leaks!

- Insert one finger alongside the cup
- Run it around the rim - it should feel smooth and round, not folded
- Give the base a gentle tug - you should feel resistance (that's the suction!)
- You can also rotate the cup from side to side to make sure it opens fully

Pro tip: You can bear down with your pelvic floor muscles to create space for the cup to open.

When it's sealed right, you should **NOT feel the cup at all**. If you feel it, it might not be in the right spot.

STEP 5: WEAR TIME

- You can wear it for **4-8 hours** depending on your flow
- **Never more than 12 hours** though!
- Day 2 usually has the heaviest flow

Signs It's Full:

- Bubbling sensation
- Light leakage
- Feeling of heaviness
- Cup sitting lower than usual
- Mild pressure

For Muse Bio: Once you have at least 5mL (Day 2 usually gets there in 4-8 hours), head to our office at your scheduled time!

STEP 6: REMOVAL

For Muse Bio Collection: You'll do this in our private bathroom at Frontier Tower! Just carefully remove the cup and pour into the vial using the funnel.

For Regular Home Use:

1. Wash your hands
2. Get in a comfy position
3. Insert your fingers and find the base of the cup
4. Pinch the base to break the seal (you might hear a little "pop")
5. Slowly pull it out while keeping it upright

6. Empty into the toilet
7. Rinse and reinsert (or wash and store)

Common Questions

"Can I pee with it in?" Yep! Your urethra (pee hole) and vagina are different openings. The cup doesn't interfere at all.

"Can I poop with it in?" Technically yes, but some people find it shifts when bearing down. If it's uncomfortable, just remove and reinsert after.

"Which size do I need?" Generally: under 30 and no vaginal births = smaller size; over 30 or have given birth = larger size. But cervix height and flow matter too! We'll help you figure it out.

"Will I feel it?" Nope! Once it's in right, you shouldn't feel a thing.

"Can it get lost?" No way! Your vagina is a closed tube. The cervix is at the end, and the cup can't go past it. You can always get it out.

"What if I can't get it out?" Stay calm! Bear down with your pelvic floor (like you're pooping), and it'll come lower. Pinch the base to break the seal, then pull. If you're really stuck, contact us or your healthcare provider.

"Is it messy?" Can be at first while you're learning! But most people get the hang of it pretty quickly. Practice at home before your first donation.

Cleaning Your Cup

- **During your period**: Rinse with water between uses
- **Between periods**: Boil for 5-7 minutes
- **Storage**: Keep in a clean, breathable bag
- **Never**: Use harsh chemicals, bleach, or put it in the dishwasher!

---

7. WHAT TO EXPECT: YOUR JOURNEY WITH US

Let's walk through what your experience will be like from start to finish! The process is different for each program, so we'll break them down separately.

RESEARCH STUDY JOURNEY

Hear About Muse Bio
↓
Learn About Both Programs
↓
Choose Research Study (or Both)
↓
Fill Out Eligibility Form
↓
[If Eligible] → Fill Out Informed Consent Form (ICF)
↓
Get Contacted to Set Up Cup Pickup (or delivery!)
↓
Schedule Collection Appointment (24 hours advance preferred!)
↓
Come to Frontier Tower at Scheduled Time
↓
Fill Out Short Health Screening Form (~5 minutes)
(Asks about lifestyle choices and health factors)
↓
Collect Sample in Private Bathroom (10-15 min)
↓
Fill Out Feedback Form (Optional, 2-5 min)
↓
Get Goodie Bag + $40 Compensation Immediately!

↓

Repeat as desired! (Once per cycle, up to 9x/year)

Time Commitment: About 30-45 minutes per visit total

COMMERCIAL PROGRAM JOURNEY

Hear About Muse Bio

↓

Learn About Both Programs

↓

Choose Commercial Program (or Both)

↓

Sign Commercial ICF (Informed Consent Form)

↓

Schedule Appointment to Pick Up Cup (or have it sent!)

↓

Set Up Screening Appointment

↓

At Screening: Fill Out Health Questionnaire Independently
(This helps determine eligibility)

↓

Staff Reviews & Has Health Screening Interview
(Going over each section verbally, clarifying anything)

↓

[If Risk Factors Identified] → Notified, Cannot Participate
[If No Risk Factors] → Continue to Collection!

↓

Schedule Collection Appointment
(Could be same day as screening if you prefer!)

↓

On Collection Day: Come Wearing Cup After 4-8 Hours
(Make sure appointment is scheduled 24 hours in advance!)
↓
Final Physical Examination
(Staff checks for new risk factors or medical history changes)
↓
[If Still Eligible] → Proceed with Collection
↓
Remove Cup & Pour Into Vial in Private Bathroom
↓
Fill Out Feedback Form (Optional)
↓
Receive Goodie Bag Immediately!
↓
Reminder: Must Get Tested Within 7 Days
(Blood draw + urine test, can be before or after collection)
↓
Complete Testing
↓
Receive $150 Compensation!
(Regardless of test results - compensation is for completing all steps)
↓
Repeat Donations? Same Process Every Time!
(Consent → Screening → Collection → Testing → Compensation)

Time Commitment:

- Initial: 1.5-2.5 hours across multiple appointments
- Repeat: Same process each time (includes fresh screening)

Note: You'll already have your cup after the first time!

---

8. WHO CAN DONATE? ELIGIBILITY REQUIREMENTS

Basic Requirements

You're potentially eligible if you:

- ✅ Are **between 18-45 years old**
- ✅ **Menstruate regularly**
- ✅ Are in **general good health**
- ✅ Can **get to San Francisco** (Frontier Tower)

But there's more to it! Let's break down the specific eligibility criteria.

Health Questionnaire & Screening

Both programs require you to complete a health questionnaire. For the commercial program, you'll fill it out independently, then go over it with our staff in a health screening interview. This helps us determine if you're eligible to donate!

CANNOT DONATE (Permanent or Indefinite Deferral)

If you have any of the following, you unfortunately cannot participate in our programs:

Pregnancy & Reproductive:

- Currently pregnant
- Breastfeeding or within 6 months postpartum (must be >6 months AND have had 1-2 normal cycles)
- Amenorrhea (no period) for >6 months
- **Currently have an IUD** (must be removed + 90 day wait period)
- **Diagnosed endometriosis** (with formal diagnosis OR pathology/imaging confirmation)
- History of **genital herpes** (HSV-1 or HSV-2) - any history

- Endometrial ablation, hysterectomy, or D&C

Infectious Diseases:

- HIV positive (HIV-1 or HIV-2)
- Hepatitis B positive
- Hepatitis C positive
- HTLV positive
- **CMV positive** (Cytomegalovirus)
- **Chagas disease**
- Malaria or dengue
- Babesiosis
- Any history of **IV drug use** (non-prescription)

Cancers:

- Cervical, ovarian, or uterine cancer
- Sickle cell disease (note: sickle cell TRAIT is okay!)
- Blood cancers, leukemia, lymphoma, myeloproliferative disorders

Other Serious Conditions:

- Organ or tissue transplant recipient
- Ever taken immunosuppressant medications
- Chronic anticoagulation therapy
- CJD/TSE or family member with CJD/TSE
- Lived in UK 3+ months between 1980-1996
- Lived in Europe 5+ years between 1980-2001
- Received blood, transplants, or human-derived products in UK/France

TEMPORARY DEFERRAL (Must Wait Before Donating)

These conditions require a waiting period before you can donate:

Recent Procedures/Treatments:

- IUD insertion or removal: 90 days
- Gynecologic procedures: 90 days
- Major surgery: 90 days after full recovery
- Recent hospitalization: 90 days after discharge
- Recent antibiotic use for infection: 14 days after last dose
- Recent systemic corticosteroids: 30 days after last dose
- Recent tattoo/piercing (unlicensed facility): 12 months
- Topical vaginal medications: 72 hours

Recent Infections/Illnesses:

- Active symptoms (fever, cough, etc.): Until symptom-free + appropriate period
- Recent STI diagnosis and treatment:
    - Chlamydia/Gonorrhea: 21 days after treatment + negative test of cure
    - Trichomoniasis: 21 days after treatment
    - Bacterial vaginosis: 21 days after treatment
    - Active genital warts: Until treated + healed + 30 days
- Syphilis: Must have documented adequate treatment

Risk Factors:

- Sexual contact with high-risk individuals: 12 months
- Sex for money/drugs: 12 months

- Blood transfusion: 12 months
- Needlestick injury: 12 months
- Incarcerated >72 hours: 12 months from release
- Babesia-endemic state outdoor exposure: 6 months

CONDITIONALLY ELIGIBLE (Assessed Case-by-Case)

These conditions might be okay depending on severity and other factors:

- **PCOS** (Polycystic Ovary Syndrome) - as long as cycles are regular enough
- **Uterine fibroids** - as long as not causing severe irregularity
- **Irregular cycles** - depends on pattern and consistency
- Past medical history of controlled conditions (thyroid, diabetes, etc.)
- Tobacco or alcohol use
- Birth control use (pills, patch, ring - all generally fine!)
- Tubal ligation
- Resolved medical conditions from >12 months ago

Important Note: Just because something is on this list doesn't guarantee eligibility - we'll discuss your specific situation during the health screening interview!

Special Notes

CRITICAL CLARIFICATIONS:

Birth Control:

- Pills, patch, ring, implants: Generally eligible! ✅
- **IUDs (both hormonal and copper): NOT eligible** ❌
    - Must be removed + 90 day wait period

Endometriosis:

- Formal diagnosis by doctor: NOT eligible ❌
- Suspicion without confirmed diagnosis: May be eligible (assessed case-by-case)

Cervical Issues:

- Past cervical dysplasia (LSIL/HSIL/CIN) that's been treated with normal follow-up Pap: Generally eligible
- Currently undergoing treatment: Temporary deferral until treatment complete + 6 months with normal Pap

Syphilis:

- Documented adequate treatment per CDC guidelines: Eligible immediately after completion
- Untreated: NOT eligible until treated

CMV:

- Ever tested positive OR diagnosed: NOT eligible ❌
- Lifelong infection that cannot be cured

What "Assessed Case-by-Case" Means: During your health screening interview, we'll discuss your specific situation in detail. Many conditions depend on:

- Severity
- How well-controlled they are
- Time since diagnosis/treatment
- Impact on your overall health

We can't make eligibility determinations over the phone or online - it requires going through the screening process!

Age Requirements

Both Programs: 18-45 years old

For More Information

If you're not sure about your eligibility:

1. Fill out the eligibility form - we'll review it!
2. Schedule a health screening interview - we can discuss your situation
3. Email us at muse@mycells.bio with general questions

Remember: **We're not a medical practice and can't provide medical advice.** For questions about your health conditions, please consult your healthcare provider. During our screening process, we can discuss whether specific conditions affect eligibility for our programs!

ALL Gender Identities Welcome!

Transgender men who menstruate: Absolutely eligible! ✨
Non-binary folks who menstruate: Absolutely eligible! ✨
Intersex individuals who menstruate: Absolutely eligible! ✨

We provide inclusive, respectful screening for everyone. Your gender identity doesn't affect eligibility - only whether you menstruate and meet the health criteria.

---

9. LET'S TALK MONEY: COMPENSATION & PERKS

Research Study Compensation

What You Get Per Donation:

- **$40 Visa/Mastercard gift card** (use it anywhere!)
- **Muse Bio goodie bag**

What's in the Goodie Bag? Contents change each time! Might include:

- Health and wellness goodies
- Period care products
- Self-care items
- Sustainable products
- Little treats

Repeat donors get NEW stuff each time - no repeats!

The Limits:

- Up to **9 donations per calendar year** (once per menstrual cycle)
- Max **$2,000 per year** total

Tax Stuff (Don't Stress!):

Before 2026: If you earn over $600/year from research participation, you get a tax form (1099-MISC)

Starting January 1, 2026: That threshold goes up to $2,000! This is because of a federal tax law change.

With 9 donations × $40 = $360, most people won't hit either threshold!

If you do somehow exceed the threshold, we'll have you fill out a Form W-9 (just your basic info for tax reporting).

When You Get Paid: Right after you donate! We hand you the gift card and goodie bag in person.

Commercial Program Compensation

What You Get Per Donation:

- **$150 Visa/Mastercard gift card** (use it anywhere!)
- **Muse Bio goodie bag**

IMPORTANT - Payment Timing:

- **Goodie bag**: Immediately after collection
- **$150 gift card**: After you complete blood/urine testing (within 7 days of collection)
- **Regardless of test results**, you get the $150 for completing all steps of the program!

The Deal:

- You get the same $150 whether your sample produces amazing cells or just okay ones
- Payment is for your time and effort, not cell quality
- Up to **13 donations per year** (once per menstrual cycle)
- Annual maximum: **$2,000 per calendar year**

Remember: This is it - one-time payment per donation cycle. No royalties, no profit-sharing ever. But you can participate again in future cycles!

Tax Stuff: This is income and might be taxable. You might get a 1099 form if you donate enough. Check with a tax pro if you're unsure!

What Everything Costs (For You: Almost Nothing!)

Muse Covers:

- Health screening and interview

- Blood/urine testing (commercial program) - **Muse covers the full cost** (normally $500-1000+!)
- Menstrual cup (yours to keep!) - **provided at no cost to you** (normally $20-40)
- All collection supplies
- Staff support and guidance

You Pay For:

- Transportation to Frontier Tower
- Parking (though we listed nearby garages!)

Your Total Out-of-Pocket: Basically just gas/parking!

The Real Perks

Beyond the Money:

- Menstrual cup at no cost (saves you $2,000-3,000 over your lifetime!)
- Learn about menstrual health
- Be part of cutting-edge biotech
- Environmental impact - reduce disposable product waste
- Join a community of participants

Research Study Specific:

- Help make stem cell therapies more accessible
- Advance scientific understanding
- Might get invited to future studies if your cells are great!

Commercial Program Specific:

- Support innovative beauty industry
- Be part of sustainable cosmetics movement

---

10. YOUR QUESTIONS ANSWERED (TONS OF FAQS!)

About Muse Bio

Q: Who are you guys? A: We're Muse Bio, a biotech company founded in 2024 by CEO Juliette Humer and COO Tommy Kronmark. We're a team of 6 passionate people working with menstrual blood stem cells to advance both science and innovation!

Q: What are MenSCs? A: They're menstrual blood-derived mesenchymal stem/stromal cells - basically powerful stem cells found in menstrual blood that have regenerative properties and produce beneficial proteins and growth factors.

Q: Where are you located? A: Our collection site is Frontier Tower (995 Market St, San Francisco). That's the only location you'd ever need to visit!

Q: What are your hours? A: Office hours are 9-5, Monday-Friday. Sample collections are usually 10 AM - 2 PM, but we're flexible! Come whenever you're ready, though we'd appreciate 24 hours advance notice if possible.

Q: How do I contact you? A: Email us at muse@mycells.bio! We're also building out a WhatsApp Business account that'll be your main way to reach us soon.

Q: Do you have products on the market yet? A: Not yet! We're in the building phase. We supply ingredients to cosmetic manufacturers, but nothing's hit shelves yet.

Q: Have you published research? A: Not yet, but we're working toward it as we gather data!

Q: How can I stay updated? A: Sign up for our newsletter at https://musebio.kit.com/c075845a8e, or follow us on Instagram (@muse_bio) or LinkedIn!

Q: I don't live in the Bay Area - can I still participate? A: We're working on it! We're currently developing an at-home collection kit so people can conveniently collect at home and ship samples to us. It's all in the works - stay tuned by signing up for our newsletter!

Choosing a Program

Q: What's the main difference between the two programs? A: Research Study = your sample is used for science only, $40 payment, no blood/urine tests needed, just a quick 5-min health screening form. Commercial Program = your sample is used to make products that are sold, $150 payment, blood/urine tests required (Muse covers the full cost!), you give up all rights after processing.

Q: Can I do both programs? A: Yes! But remember - you can only donate once per menstrual cycle. So you'd alternate between programs across different cycles.

Q: Which should I pick? A: Totally up to you! Research study is great if you want to support science without commercial use. Commercial program pays more but requires blood/urine tests and you're giving up ownership after processing. Both are valuable!

Q: Can I switch programs? A: Yep! You can choose different programs for different cycles. But once a sample is donated to one program and processed, that specific sample stays with that program.

Q: Can I donate to both on the same day? A: Nope - you can only collect one sample per menstrual cycle. You'd have to wait for your next period to donate to the other program.

Menstrual Cup Questions

Q: Do I HAVE to use a cup? A: Yes - cups are our collection method. They're cleaner, better for you, and better for the planet! Plus we give you one at no cost that's yours to keep forever.

Q: I've never used one - is it hard? A: Most people get it within 1-2 tries! We provide detailed instructions, and you can practice before you donate. Lots of people actually prefer cups to tampons once they're used to them.

Q: Can I use my own cup? A: Absolutely! Any medical-grade silicone cup works. We just want to make sure you have one.

Q: Can I keep the cup after? A: YES! It's yours. Use it for future donations, use it for your regular periods, whatever you want. One cup lasts up to 10 years!

Q: What if I have questions about using it? A: Just ask us! We're here to help. Email muse@mycells.bio or ask when you pick up your cup.

Collection Process

Q: Do I collect at home? A: Nope! You wear the cup at home until you have enough volume (at least 5mL), then come to our office at your scheduled time to transfer it into our collection vial. Easy peasy!

Q: How much blood do you need? A: Minimum 5mL (about a teaspoon). Don't worry about measuring precisely - Day 2 of your cycle usually has plenty!

Q: What if I can't collect enough? A: Day 2 is usually heavy enough to hit 5mL easily. If you have really light flow, we can talk about whether this program is right for you during your health screening interview.

Q: Where exactly do I go? A: Frontier Tower, 995 Market St, San Francisco, CA 94103. That's our only collection site!

Q: Is there parking? A: Yes! We listed three nearby parking garages in Section 1. They're all pretty close!

Q: How long does collection take? A: Once you arrive, the actual collection takes 10-15 minutes. Super quick!

Q: What's the best day to donate? A: Day 2 of your cycle is ideal (heaviest flow, best cells), but Days 1-3 all work great!

Q: How far in advance do I need to book? A: **Please try to book at least 24 hours in advance!** This really helps us prepare for you. BUT we totally understand periods are unpredictable - if you need

something last-minute, reach out and we'll do our best to help! Come whenever you're ready. 💙

Q: What if I need to cancel? A: Just let us know ASAP at muse@mycells.bio. Life happens - we get it!

Q: Can someone come with me? A: Sure! They can hang out in the waiting area while you're in the private bathroom.

Q: What should I bring? A: Just yourself (wearing your cup with sufficient volume), and your ID for your first visit. That's it!

Eligibility

Q: Who can donate? A: Anyone 18-45 years old who menstruates regularly, is in general good health, and can get to San Francisco!

Q: What's the screening process? A: Both programs: Eligibility form + health screening. Research: Quick 5-min health form at collection. Commercial: Health questionnaire + health screening interview + blood/urine tests.

Q: What diseases do you test for (commercial program)? A: We test for 10 things: HIV, Hepatitis B & C, Syphilis, HTLV, West Nile Virus, Chlamydia, Gonorrhea, CMV, and Chagas. Muse covers the full cost!

Q: What happens if I test positive? A: We'll contact you within 48 hours with compassion and confidentiality, provide a pre-written letter to the healthcare provider of your choosing and healthcare provider referrals for diagnosis and treatment. You won't be eligible to donate to the commercial program. **Important: Muse Bio is NOT a medical practice. We cannot diagnose conditions or provide medical treatment. You must follow up with a licensed healthcare provider.** Regardless of results, you get the $150 for completing all program steps!

Q: Do I need blood/urine tests for research study? A: Nope! Just a quick 5-minute health screening form at the time of collection.

IMPORTANT NOTE FOR HEALTH QUESTIONS BELOW: We're providing general information about eligibility criteria, NOT medical advice or diagnosis. For questions about your specific health

conditions or symptoms, please consult your healthcare provider.

Q: Can I donate if I'm on birth control pills, patch, or ring? A: Usually yes! These generally don't affect eligibility. Specific eligibility is determined during the health screening process.

Q: Can I donate if I have an IUD? A: **No, unfortunately not.** Both hormonal IUDs (Mirena, Skyla, etc.) and copper IUDs (Paragard) require removal + a 90-day wait period before you can donate.

Q: Can I donate if I have diagnosed endometriosis? A: **No, unfortunately not.** If you have a formal diagnosis from a physician OR pathology/imaging confirming endometriosis, you cannot donate. However, if you just have suspicion without a confirmed diagnosis, you may be eligible - we'd assess case-by-case during screening.

Q: Can I donate if I have PCOS? A: Often yes! PCOS alone doesn't automatically disqualify you, as long as your cycles are regular enough. We'll discuss during your health screening interview.

Q: Can I donate if I have fibroids? A: Generally yes, as long as they're not causing severe menstrual irregularity. We'll assess case-by-case during screening.

Q: I'm 46 - can I still donate? A: Unfortunately, our programs are for ages 18-45 only.

Q: Can trans men or non-binary people who menstruate donate? A: Absolutely! All gender identities are welcome. If you menstruate and meet the health criteria, you're potentially eligible!

Q: I have [specific health condition] - can I donate? A: We can't make eligibility determinations without going through the screening process. The best approach is to fill out the eligibility form and we'll discuss your situation during the health screening interview! Many conditions are assessed case-by-case.

Compensation

Q: When do I get paid? A: Research study: Immediately after you donate. Commercial program: Goodie bag immediately, $150 after you complete blood/urine testing. Both are handed to you in person or sent after testing!

Q: How do I get paid? A: Visa/Mastercard gift cards that work anywhere these cards are accepted.

Q: Do I get paid even if my cells aren't great? A: YES! Same amount regardless of cell quality. Payment is for your time and effort, not the quality.

Q: Do I get paid if my test results are positive (commercial)? A: YES! You get the $150 for completing all steps of the program, regardless of test results.

Q: Is this taxable? A: Might be! Most research study folks won't hit the tax reporting threshold ($600 before 2026, $2,000 starting 2026). Commercial program participants who donate a lot might get a 1099 form. Check with a tax advisor!

Q: What's in the goodie bag? A: Fun stuff that changes each time! Wellness products, period care items, self-care stuff, sustainable products. Each donation gets you something new!

Q: How many times can I donate? A: Research: Up to 9 times per year. Commercial: Up to 13 times per year. But remember - only ONCE per menstrual cycle! Annual max for both: $2,000.

Q: Does it cost me anything? A: Nope! Everything is provided at no cost to you except your transportation/parking to get here.

Sample Use

Q: What happens to my sample (research)? A: It's analyzed for stem cell quality and viability, maybe frozen for retesting, stored for up to 9 months, then properly disposed of. Not sold, not used commercially.

Q: What happens to my sample (commercial)? A: Cells are isolated, grown, and their beneficial secretions are collected. Then all cells are filtered out, leaving a cell-free ingredient that's sold to cosmetic manufacturers.

Q: Could my cells be used for cloning? A: Nope! First, human cloning is illegal. Second, the commercial products are totally cell-free - all cells are removed.

Q: Could my DNA be studied? A: Research study: possibly for research purposes, but only with de-identified samples. Commercial program: cells might be analyzed during processing but final product is cell-free.

Rights & Ownership

Q: Can I take back my donation after processing starts? A: No. Before processing starts: Yes, you can change your mind! After processing starts (within hours): Nope, it's permanent. This is especially important for the commercial program where you give up all rights once processing begins.

Q: Will I get royalties if products sell well (commercial)? A: No. Just the one-time $150 per donation, no matter how successful products become.

Q: Do I own my cells after processing begins? A: For research: Muse Bio owns them for research purposes. For commercial: Muse Bio owns them and ALL commercial rights after processing begins - you have zero ownership.

Q: What rights do I keep? A: You can say no to future donations, get a copy of your consent, ask questions, and request deletion of personal info (though de-identified data stays).

Practical Stuff

Q: How long does everything take? A: Research study: About 30-45 minutes per visit. Commercial program: 1.5-2.5 hours across multiple appointments initially (includes screening and testing), repeat donations are the same full process each time.

Q: Do I have to come to San Francisco? A: Currently yes, our only collection site is Frontier Tower in SF. BUT we're working on an at-home collection kit for people to collect and ship to us - it's in development!

Q: What if I move away? A: If you move and can't get to SF anymore, you wouldn't be able to keep participating. But we're working on that at-home kit! Sign up for our newsletter to hear when it launches.

Q: What if I get pregnant? A: Pregnancy is a deferral. Once you deliver, are >6 months postpartum, fully weaned, and your period returns (1-2 normal cycles), you can participate again!

Q: Can I give feedback? A: Please do! We have an optional 2-5 minute survey after each donation. Your input helps us improve!

---

11. GET IN TOUCH

Main Contact

Email: muse@mycells.bio
WhatsApp Business: Coming soon! (We're still building this out, but it'll be your main way to reach us)

LinkedIn: https://www.linkedin.com/company/musebio-cells/ (Connect with us!)

Newsletter: https://musebio.kit.com/c075845a8e (Stay in the loop!)

Our Founders

CEO: Juliette Humer - LinkedIn
COO: Tommy Kronmark - LinkedIn

Location

Frontier Tower (Our Collection Site)
995 Market St, San Francisco, CA 94103

Hours: 9 AM - 5 PM, Monday-Friday
Collections: Usually 10 AM - 2 PM (but we're flexible!)

Parking nearby:

- Ingka Centers Garage: 440 Stevenson St

- 486 Jessie St
- 25 Mason St

For Specific Inquiries

General Questions: muse@mycells.bio or our WhatsApp Business (coming soon!)

Investor Inquiries: muse@mycells.bio or WhatsApp Business

Partnership Opportunities: muse@mycells.bio or WhatsApp Business

Media Inquiries: muse@mycells.bio

Technical Website Issues: muse@mycells.bio

Urgent Matters: Email muse@mycells.bio with "URGENT" in the subject line

Program Information

Research Study

- IRB Protocol: Pro00088779
- IRB: Advarra IRB

Commercial Donation Program

- Type: Commercial donation program

Scheduling

After you sign up, we'll send you detailed instructions via email and Google Calendar links for:

- Menstrual cup pickup appointments
- Sample collection appointments

Remember: Please try to schedule at least 24 hours in advance! But we're flexible and understanding if you need last-minute help. 💙

APPENDIX: FOR THE AI AGENT

How to Sound Like Us

Our Vibe:

- Friendly and warm (like talking to a knowledgeable friend!)
- Enthusiastic about the science without being weird
- Real and authentic
- Understanding and empathetic
- Never corporate-y or robotic

Things to Emphasize:

- Schedule 24 hours in advance (but we're flexible and understand!)
- One donation per menstrual cycle
- Commercial program = you give up all rights after processing (be super clear!)
- Everything happens at Frontier Tower in SF
- Cup provided at no cost = yours to keep
- Age range: 18-45
- IUD = cannot donate
- Diagnosed endometriosis = cannot donate

CRITICAL - Medical Boundaries:

We Are NOT a Medical Practice: Muse Bio is a research and commercial donation program, NOT a healthcare provider. We have ZERO authority to:

- Diagnose medical conditions
- Provide medical advice
- Recommend treatments or medications
- Interpret symptoms or test results for medical decision-making
- Tell someone what their health symptoms mean
- Suggest whether someone should see a healthcare provider
- Say "we provide care"

When Someone Asks Medical Questions:

Format: "That's a great question for your healthcare provider! We're not a medical practice and can't provide medical advice. [Then provide relevant program info if applicable, like eligibility criteria in general terms]"

Never Say:

- Medical advice or diagnosis
- "We provide care"
- Guarantee of eligibility before screening
- Legal advice
- Specific product names (we have none on market yet)
- Personal information about other participants
- Anything suggesting we can provide medical care

If Someone Needs a Human:

- Specific medical condition questions → "We'll discuss this in your health screening interview!"

- Confused about commercial rights → Re-explain clearly
- Positive test result concerns → Compassionate response + contact us
- Adverse events → Contact us immediately
- Medical symptoms or health concerns → "Please consult your healthcare provider"

Red Flags:

- Under 18 or over 45 → Must be 18-45, sorry!
- Asking for diagnosis → We're not a medical practice! Redirect to healthcare provider
- Asking for medical advice → We're not a medical practice! Redirect to healthcare provider
- Trying to donate same day → Please schedule 24 hours in advance (but we'll try to help!)
- Describing concerning symptoms → "Please consult your healthcare provider for medical concerns"
- Has IUD → Cannot donate until removed + 90 day wait
- Has diagnosed endometriosis → Cannot donate

That's Everything!

This guide should help you answer pretty much any question someone might have about Muse Bio and our programs. Remember: be friendly, be real, be helpful, and when in doubt, invite them to reach out to us directly!

We're all about making this experience as easy, transparent, and comfortable as possible. 🎉
