SAMPLE COLLECTION

Muse.

SAMPLE COLLECTION INSTRUCTIONS

Thank you for your participation in our research! Below is a step-by-step guide on how to collect your menstrual blood sample. Please contact muse@mycells.bio for any questions or concerns!

WELCOME!

You will find a table by the toilet prepared with collection items:

- Gloves
- Pre-opened vial in a rack
- The vial will be pre-labeled with subject ID, collection date, and time
- A funnel in the vial
- Sanitary wipes

1 WIPE

Use a sanitary wipe to wipe external genitalia and toss it in the trash

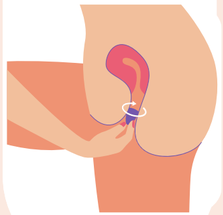
2 WASH HANDS

Wash your hands for 20 seconds and put on the provided gloves

3 REMOVE CUP

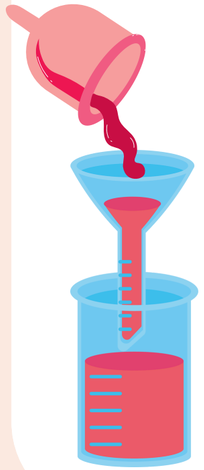
Find a comfortable position, then gently pull on the stem until you can pinch the base of the cup to release the seal.

Slowly and carefully remove the cup, keeping it upright to avoid spills.



4 POUR

Gently pour the menstrual blood from the cup into the vial up to the volume indicated by the line.



5 TOSS FUNNEL

With gloved hands, throw out the funnel in the designated biohazard waste bin

6 SHAKE TUBE

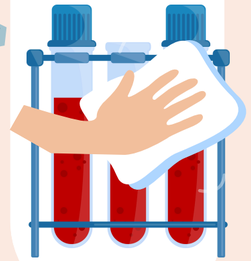
Seal the vial with the screw on lid tightly and shake the sample vigorously

7 TOSS GLOVES

Throw away soiled gloves in the designated biohazard waste bin

8 WASH HANDS

Wash your hands for 20 seconds once more.

9 WIPE TUBES


Use another sanitary wipe to thoroughly clean the outside of the sealed vial. When you're ready, leave the sample on the rack and inform the Muse Bio team members outside that your sample has been collected.
